The Art Of Technology

Business Functionality

A Universal

Software Solution

Leading Edge
Technology

Today's business environment places severe demands on any business operation. Increasing competition for sales, customer demands for higher levels of service, greater costs and lower margins, all mean that companies need to become more efficient and more pro-active in order to survive and succeed. In addition, many companies need to understand and manage a rapidly changing world market with shifting geographies and fluctuating economies.

Open System
Architecture

The Very Best In Business Software

The need for information has never been greater, and many organizations have invested in computer systems to help; but computing brings its own challenges; rapidly changing technology, emerging industry standards, confusing and conflicting messages from vendors and advisors.

Quality Software
Engineering

Today's business software needs to address all of these issues. It needs to have many facets to reflect the changing face of business and technology, and to provide an organization with the applications it needs to fight for its competitive edge in the future.

International
Standards

Money & Markets represents the very best in modern business software.

Human Perspective

Based on a true understanding of the business problems to be addressed, and on many years of research and development effort, it combines a highly functional business application with leading edge computing technology.

Limitless Expansion And Flexibility

At the design level, Money & Markets has a true Client-Server architecture, putting it at the forefront of Open Systems design concepts, and allowing almost limitless expansion and flexibility of deployment to meet changing requirements for the future. It is also designed to comply fully with international standards to provide portability, longevity and low risk investment protection for the user.

The Software is very modular, with a high degree of parameterization, making it very flexible and configurable to user requirements. The user interface is progressive and intuitive and is fully translatable, allowing a variety of international languages and industry specific terminology to be used. Designed, built and maintained using sophisticated software engineering tools and methods, Money & Markets also benefits from development and support practices which conform to the highest international quality standards.

But there is more to business software than function and technology. Above all Money & Markets has been conceived and delivered with the user in mind. The original design and production, and the continued support and development of the software are all undertaken with the greatest care and understanding, giving it a genuinely human perspective.

Advance Networking
and Communication

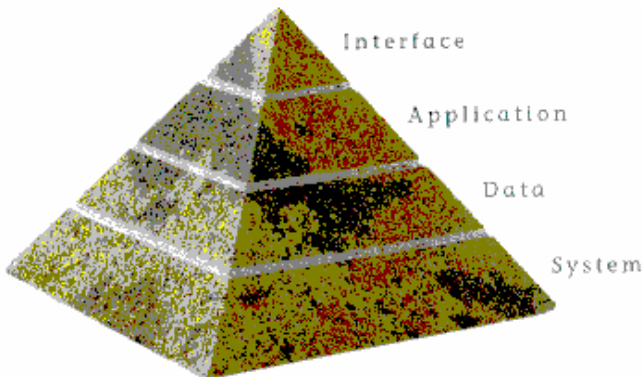

The UK government briefing for management on the issue of Open Systems states:

“The concept of Open Systems is based on the development of Information Technology (IT) products in accordance with internationally agreed and homogeneous standards to allow systems and applications developed by different manufacturers to work together.”

Money & Markets embraces this concept completely and also employs the most progressive architectural models developed within the Open Systems area.

Client - Server Architecture

The Client - Server concept is perhaps the most important modern development in Open Systems. The ability to separate the business application from the data resources and to distribute both across a company wide network provides the key to delivering fully scalable and flexible computing services to the user at his or her place of work, and to unlocking valuable corporate information resources. It also allows the user to structure the Information Technology environment to fit the organization. Money & Markets was one of the first large scale business application software products to adopt a Client-Server architecture in the Middle East and was designed from the outset to comply with this model.

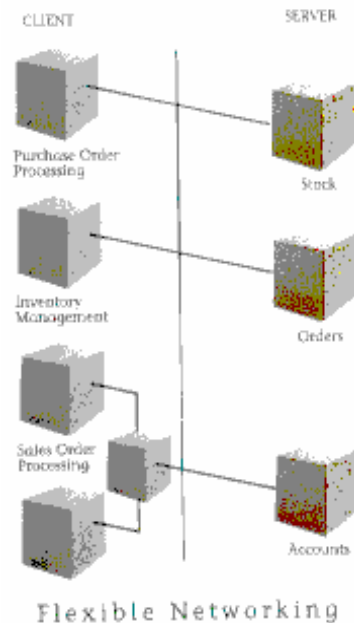

Instant Access To Information

Money & Markets supports all major relational databases and a Windows based intuitive user interface. This allows the end user instant and meaningful access to all information resources at all stages of the business process. Information access and user interface mechanisms are fully compliant with international standards, allowing access to a variety of different database and screen management products. The software also allows for extensive integration with other applications and information management tools.

Money & Markets will operate on all mainstream computer hardware and operating systems platforms and supports all major open system networking protocols, allowing implementation in a true multi-vendor environment. Both local and wide area networking is available and communications interfaces also allow connection to and integration with a variety of computers, telecommunications systems and peripheral devices.

A true Open System promises the user protection against future changes in technology, single vendor reliance, changes to the organization structure of personnel, and changes in the scale of operation, combining future-proof technology with low risk investment. Money & Markets delivers on all these promises.

Information
Management

Money & Markets provides a fully integrated suite of application modules which cover the entire sales/stock/accounting transaction cycle, focusing on the key issues of supply chain management. The software is designed to operate in a multi-company, multi-location environment and can accommodate the needs of the most complex distribution network.

High Performance Sales Order Processing

Sales Management offers a high performance sales order entry system with full on-line pricing and promotions processing, on-line stock information, and a wide variety of order types and local or remote order capture methods, including Internet/Intranet and remote workstation connection. All of these features are supported by the sophisticated marketing information database and analysis tools, and are designed to give instant responses even in the most demanding on-line transaction processing (OLTP) environment.

Distribution Resource Planning

Inventory Management offers full stock control and purchasing facilities geared to providing maximum service levels with minimum inventory investment. Money & Markets uses a sophisticated replenishment methodology based on a development of the highly acclaimed "Adaptive Forecasting" technique, and by also considering preferential prices and promotional availability optimizes the value and profit potential of stock acquisitions. Inventory can be dynamically managed across all locations within the operation and a wide variety of holding methods, including controlled batches and serial numbers, are available. The inventory and purchasing module also incorporates a sophisticated Purchase Invoice Reconciliation sub-system, to provide maximum margin control and operational efficiency.

Sophisticated Logistics Management

Logistics Management offers powerful and flexible stock allocation, order progression and dispatch control facilities, including batch and serial number allocation, load planning by route and vehicle, customizable picking and dispatch regimes and documentation, back order processing, and returns management. Order progression and stock allocation strategies are configurable by the user and can include prioritization based on dynamic customer classification, rationing, and economic unit allocation. Inter Branch Transfers together with all corresponding documentation are automatically managed against a user defined location network.

Warehouse Space Optimization

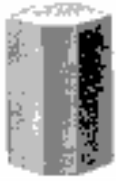

Warehouse Management provides full optimization of warehouse space, put-away lists, product locator, free space map, mixed products within locations, special storage requirement such as secure or chilled, incorporation of all stock holding methods including batch and serial numbers, and integration with radio data terminals (RDTs).

Integrated Accounting

Financial Management offers a fully functional set of integrated accounting modules covering Accounts Receivable, Accounts Payable, General Ledger and Fixed Assets, with full multi-company and multi-currency processing, drill down enquiries, on-line history, and integration with modeling and information management tools.

The Logical

Guaranteed Support

Fully Integrated

Designed, developed and maintained using sophisticated object oriented programming methods, Money & Markets achieves the highest standards of integrity and consistency demanded of today's business software.

Easy to Use and Learn

Standard message formats, thorough user documentation, on-line help, and pop-up Windows together with intuitive screen designs also make the software easy to use and easy to learn, and the commitment to continued development and support of the application means that it offers a low risk, future oriented investment.

Highly Parameterized

Recognizing the need for individuality, Money & Markets is highly parameterized, allowing the user to configure not only the transaction processing sequences and routings, but also the look and feel of the user interface. Users can even choose which language they would prefer to work in, and the modular design enables users to implement the system in stages, with greater flexibility in the deployment of the software, whilst retaining all the benefits of full integration.

International Capability

Very few international level software packages are designed with the strategic needs of an organization in mind. Very few application software packages combine leading edge computing technology, advanced design concepts, Open Systems architecture, true international capability and comprehensive focused business functionality. When all of these things are important, Money & Markets is the logical software option.

C o m p a n y P r o f i l e

Driven by the need to improve management control, reduce costs and increase revenues, profitability and market share in an increasingly competitive environment organizations now recognize the need for a business solution that is comprehensive, flexible, supports international standards, and delivers true competitive edge. JAWA Software is in a unique position to deliver application Software solutions to meet this challenge.

The Company

JAWA Software is Kuwait's leading supplier of application software and associated services and the company is now enjoying rapid overseas expansion.

JAWA Software has established a reputation for performance and reliability in the development of strategic Business Software systems and in the delivery of high quality after sales service and support.

JAWA Trading's broad and prestigious client base covering Government, Semi-Government, Retail, Distribution, Healthcare, and several other market sectors includes some of Kuwait's and the Middle East's largest organizations as well as some of their smaller counterparts and we are proud of our contribution to their business success.

Quality

JAWA Software operates in some of the most demanding market environments where product resilience and integrity is essential. In our pursuit of best practice, our published policy is to supply application Software products which are delivered on-time, to budget and always perform to specifications.

Business Partnerships

Continuous product development, guaranteed support and a commitment to building long-term relationships with our Customers and Industry Partners make JAWA Software the company of choice to meet your current and future needs.
